Determining the right type of pump for your water or wastewater application is no easy task. You must look at the specific process you're working with, how does the equipment fit into your existing environment, what are the short-term and long-term costs, and what is the ultimate goal you're trying to accomplish with the pumping system. Shaun Minton, Sales Engineer with Muniquip LLC, located in Roseville, CA, will look at the pump selection process for influent, sludge handling, heat exchange, dosing, grit, effluent and more in this 30-minute overview.

As our water use becomes more vital and complex with global threats and world scarcity, choosing the right equipment has never been more important.

SPEAKER INFO

SHAUN MINTON: SALES ENGINEER - MUNIQUIP LLC

Shaun has been involved in the water and wastewater industry for over 20-years and has worked with a wide range of solutions in that time. He has spent that entire two-decade span working with clients in the state of California and helping them meet their water and water-related equipment needs."

An RSVP without advanced notice of cancellation is a promise to pay for event. If you do not RSVP you will pay non-member price.
