

Our Power, Our Planet

Lystek

Lystek International operates the largest advanced biosolids and organics treatment facility in California. Since opening in August 2016, the Lystek Fairfield Organic Material Recovery Center (OMRC) has served as a regional facility supporting safe and sustainable biosolids management for more than 20 agencies and municipalities throughout Northern California.

Lystek's patented Thermal Hydrolysis Process (THP) is a proven low-temperature, chemical-mechanical hydrolysis technology that converts recycled biosolids and organic residuals into a Class A fertilizer product.

Join us for a technical overview of Lystek's innovative biosolids management technology, followed by a guided tour of the Fairfield OMRC facility. The presentation and tour will be led by James Dunbar and members of the Lystek team, with introductory remarks from facility management.

Itinerary, Wednesday 11/4/26

2:00 pm: Welcome and Facility Introduction
