Attendance is Limited so Register Today!

- Limited to 30 attendees
- Lunch will be provided
- Participants must wear closed toe shoes

SPECIAL NOTE:
2 CWEA Contact Hours is available for this event

Wastewater Treatment: The facility receives about 12 million gallons of wastewater per day, with spikes over 25 million gallons during the rainy season. The facility treats wastewater to a secondary level through a conventional, non-nitrifying activated sludge process. Treated effluent that is not recycled is safely disposed of through a collectively owned discharge pipe into the San Francisco Bay.

Solids Handling: Anaerobically digested solids are stored in Facultative Sludge Lagoons. Each Summer, around 1500 dry tons of Class A Biosolids are harvested and injected into a Dedicated Land Disposal (DLD) area adjacent to the plant

Recycled Water: DSRSD produced 1.4 billion gallons of recycled water in 2025. DSRSD utilizes a Ballasted Flocculation system upstream of continuously backwashing sand filters and UV disinfection. In Summer months, the plant can recycle 100% of incoming wastewater flows.

Pay by Credit cards online, CWEA does not charge a fee. For other payment methods, contact Ryan. No refunds, attendee substitutions allowed.
