California's role as water reuse pioneers continues with pending regulations for direct potable reuse (DPR). A critical component to protecting DPR systems is an increased focus on pretreatment and sewershed monitoring, frequently called enhanced source control.

Join California's leading wastewater experts for in-depth discussions and information sharing about regulations, research, case studies, and success stories from managers and inspectors implementing their new enhanced source control programs.

California is depending on us to get DPR right. **Join us, and together, we'll make DPR another California success story!**
