The Metropolitan Water District of Southern California is making a major investment in a potential water recycling project that will reuse water currently sent to the ocean.

The Regional Recycled Water Program will purify wastewater

to produce sustainable, high-quality water that could be used again. This partnership with Los Angeles County Sanitation Districts started with a demonstration facility and could eventually become one of the largest advanced water treatment plants in the world.

The Joint Water Pollution Control Plant (JWPCP) currently provides primary and secondary treatment for a design capacity of 400 million gallons of wastewater per day, and serves over 4.8 million residents, businesses and industries. Flows currently average approximately 200 MGD.

### PARKING INFORMATION

The facility is located at the JWPCP in Carson off the 405 freeway.

**Parking address and instructions will be emailed to all attendees.**

**Please wear closed toe shoes.**
